

Creating A New Approach to Peatland Ecosystems

The CANAPE project is;

- **Innovating restoration** techniques, improving lakes by sediment reuse, and peatlands
- **Restoring 4 peatland bogs** and **3 lakes** across five EU countries
- Developing **Paludiculture products** including moss or reed growing media and charcoal to allow use of wetlands in a sustainable way.
- Supporting the development of carbon and water storing agriculture
- Engaging with public about **ecosystem services of sustainable wetland management** through citizen science
