

CoLab Denmark

Lise Wraae Silberling, Program manager CoLab Denmark

CoLab Denmark

The concept

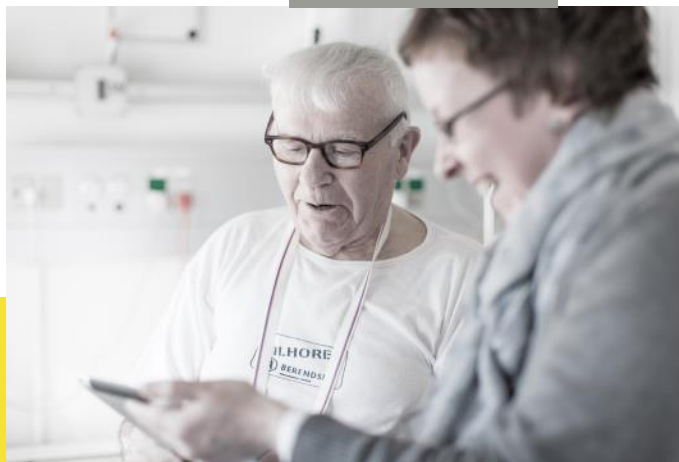

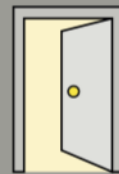

"CoLab Denmark represents a conceptual model for the development of healthcare technologies cross-sectoral within the Danish Healthcare system.

A CoLab is a local testbed, anchored directly into daily operations. The real experts – the operating staff at the hospital and municipality – all pool their knowledge, needs and facilities into a common model for co creating with citizens and companies. Thereby creating a unique opportunity to test and develop tomorrows next-gen healthcare technologies in accordance with real end-user needs alongside with giving the companies value feedback to be used in perfecting a product."

CoLab Denmark

Why?

Challenges

- what are they?

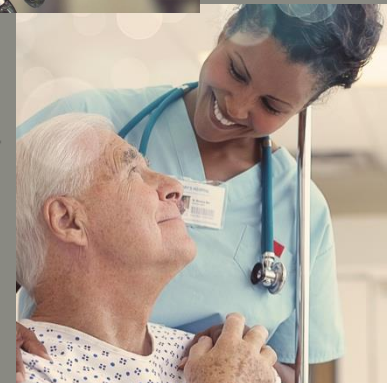

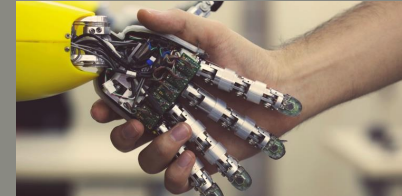

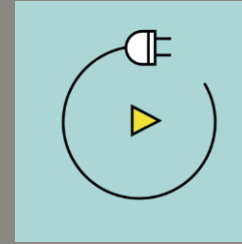

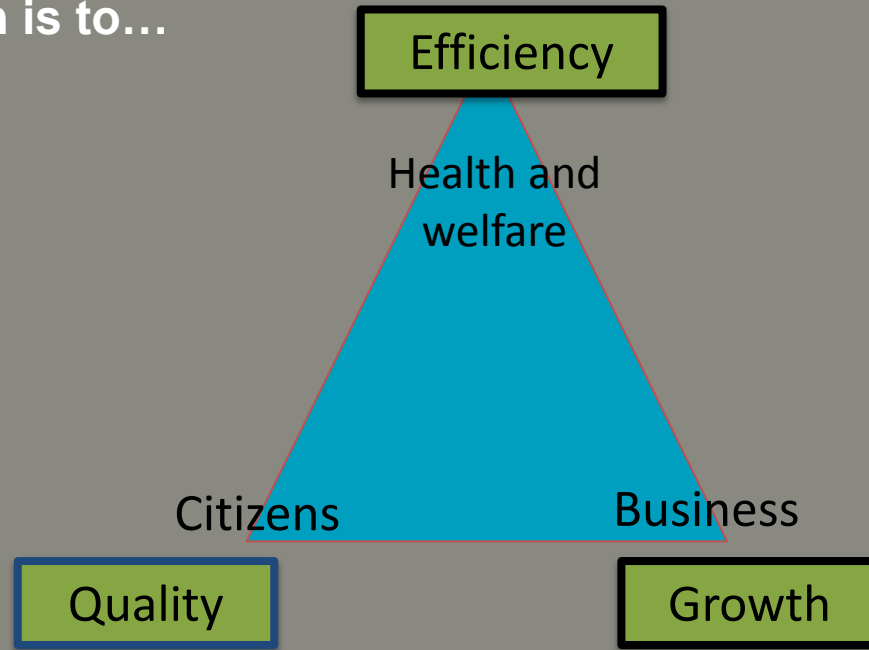

*The municipalities and private companies require help with testing whilst **documenting the effects** hereof and a more focused orientation towards market needs.*

*It is difficult for SME's and large companies to gain access to **simulated environments** that represents daily operations, and also standardized test- and product development courses. Complex guidelines for law and the lack **of riskful capital** is also an important obstacle to overcome.*

*Public organizations call for more **evidence-based documented** effects of assisted living technologies, and a more solid and reliable base for **decision-making** when investing in new technologies.*

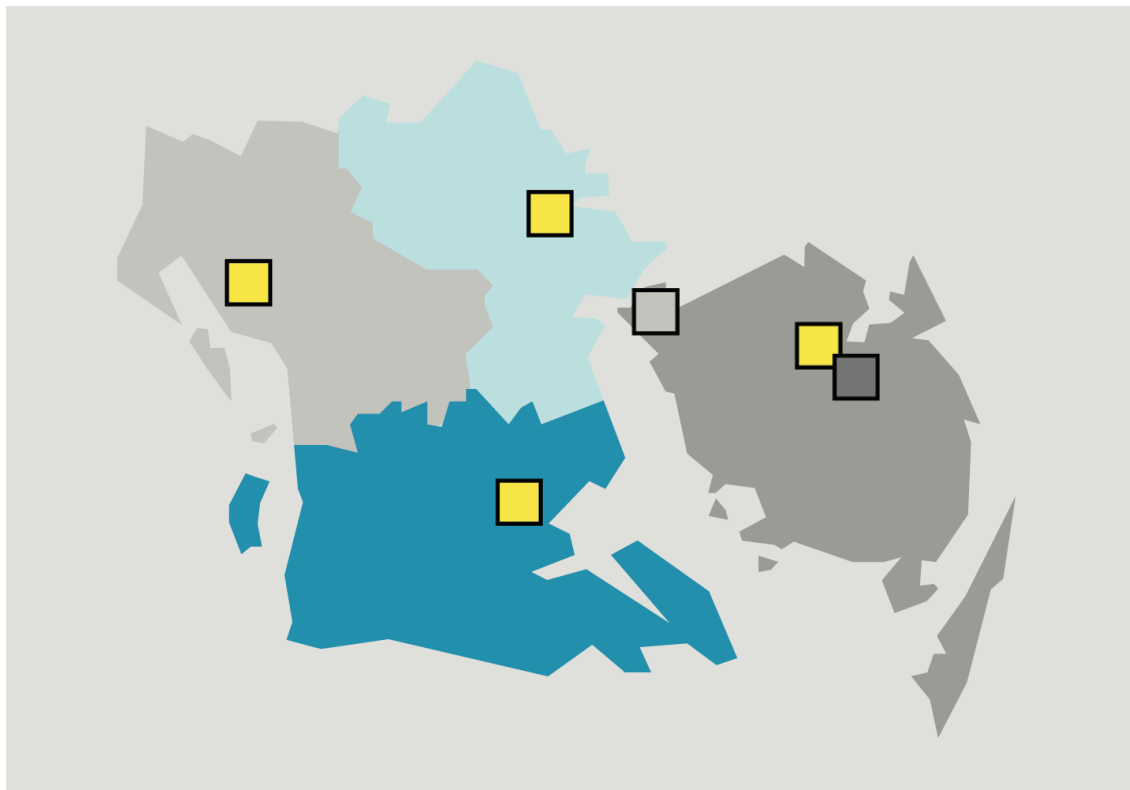

Our aim is to...

- 1) Boost efficiency in health and welfare and collaborate across sectors
- 2) create growth and jobs
- 3) improve quality for citizens

CoLab Denmark

How?

-  Localized CoLabs
-  CoLab Recovery & Rehab
-  CoLab Plug & Play

What CoLab Denmark does..

Real life testing in local CoLabs

Health and welfare technologies are being developed and implemented in real life

Coordinates to ensure no wrong doors

Ensures coordination of enquiries and professional match making

Creates local ownership

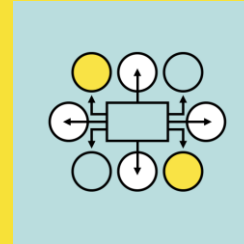

Four local CoLabs co run the operational test and development processes

Ensures standardized processes

Tools and methods to ensure measurement and documentation of effects

Builds strong partnerships

Cooperation between national and international public and private partners.

CoLab Plug & Play

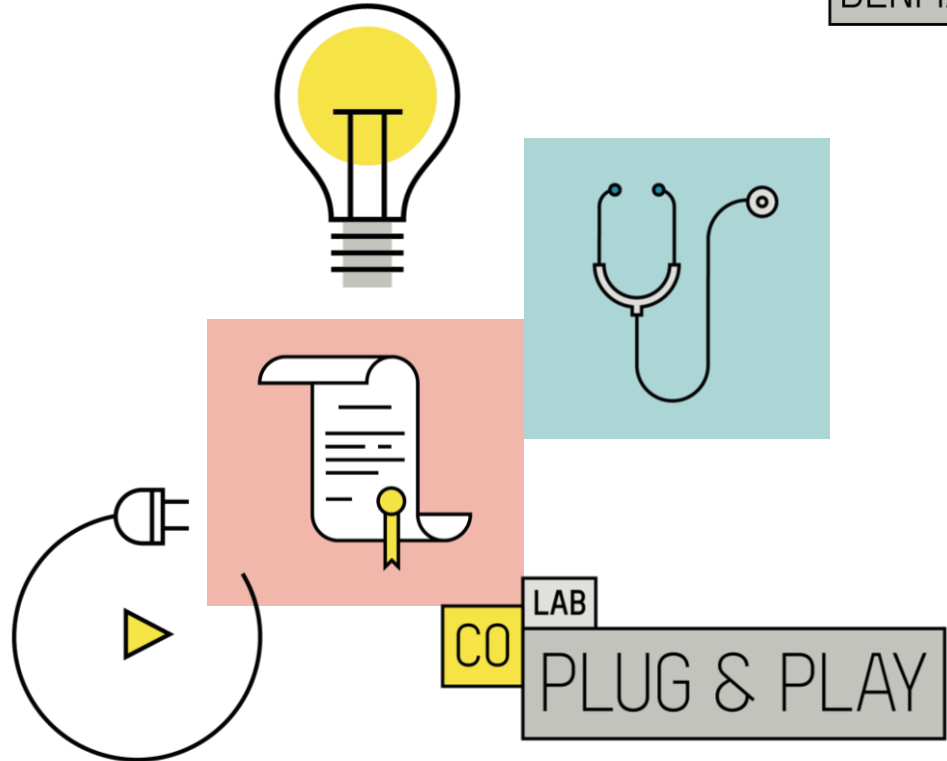

A reliable test

In CoLab Plug & Play, you can test the solution in the context it should function - both technical, organizational and in relation to the citizen

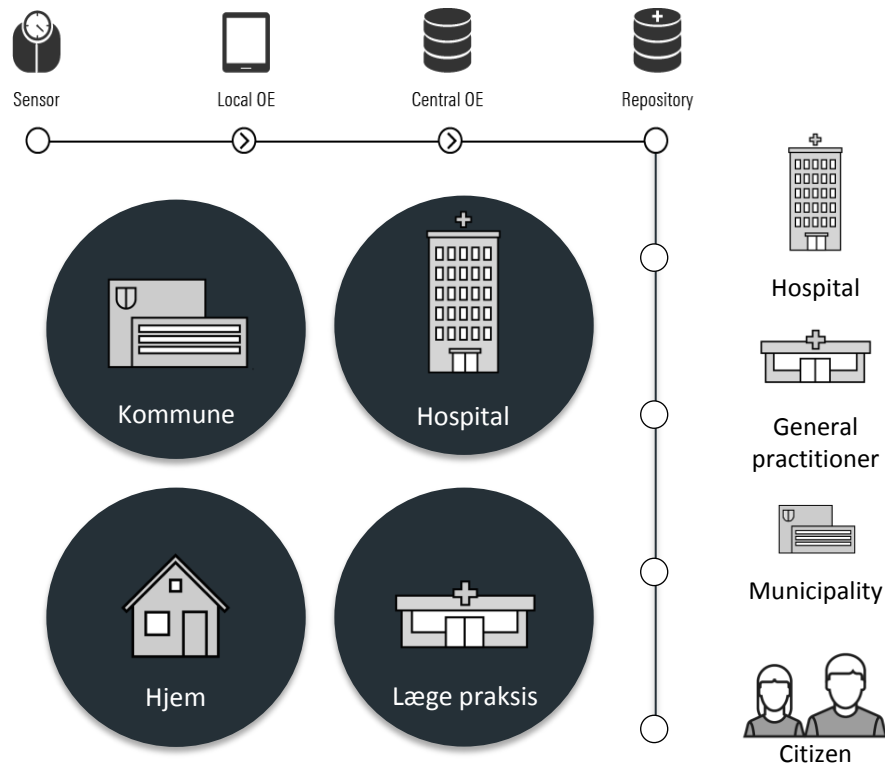

We provide access to:

- State-of-the-art testing facilities
- Tailored development processes
- Service and advice
- User Panel consisting of experts and citizens
- Certification of your technology according to international standards

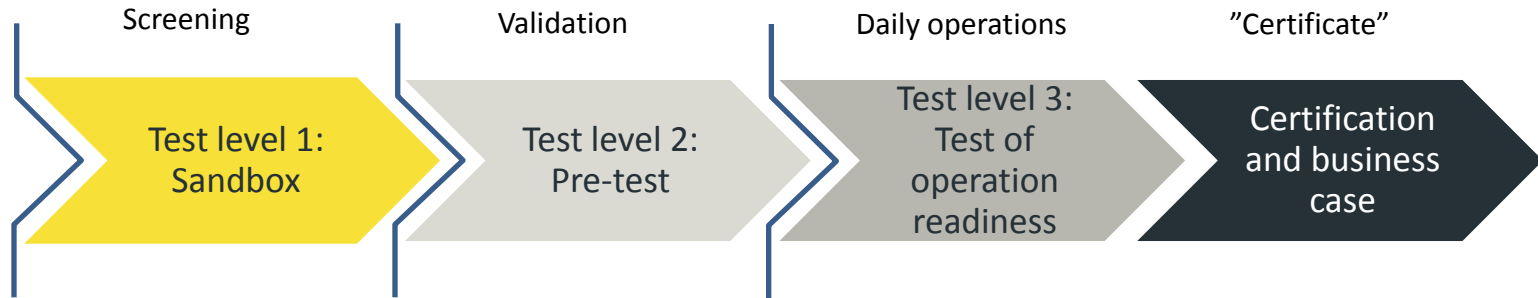

CoLab Plug & Play

The setup

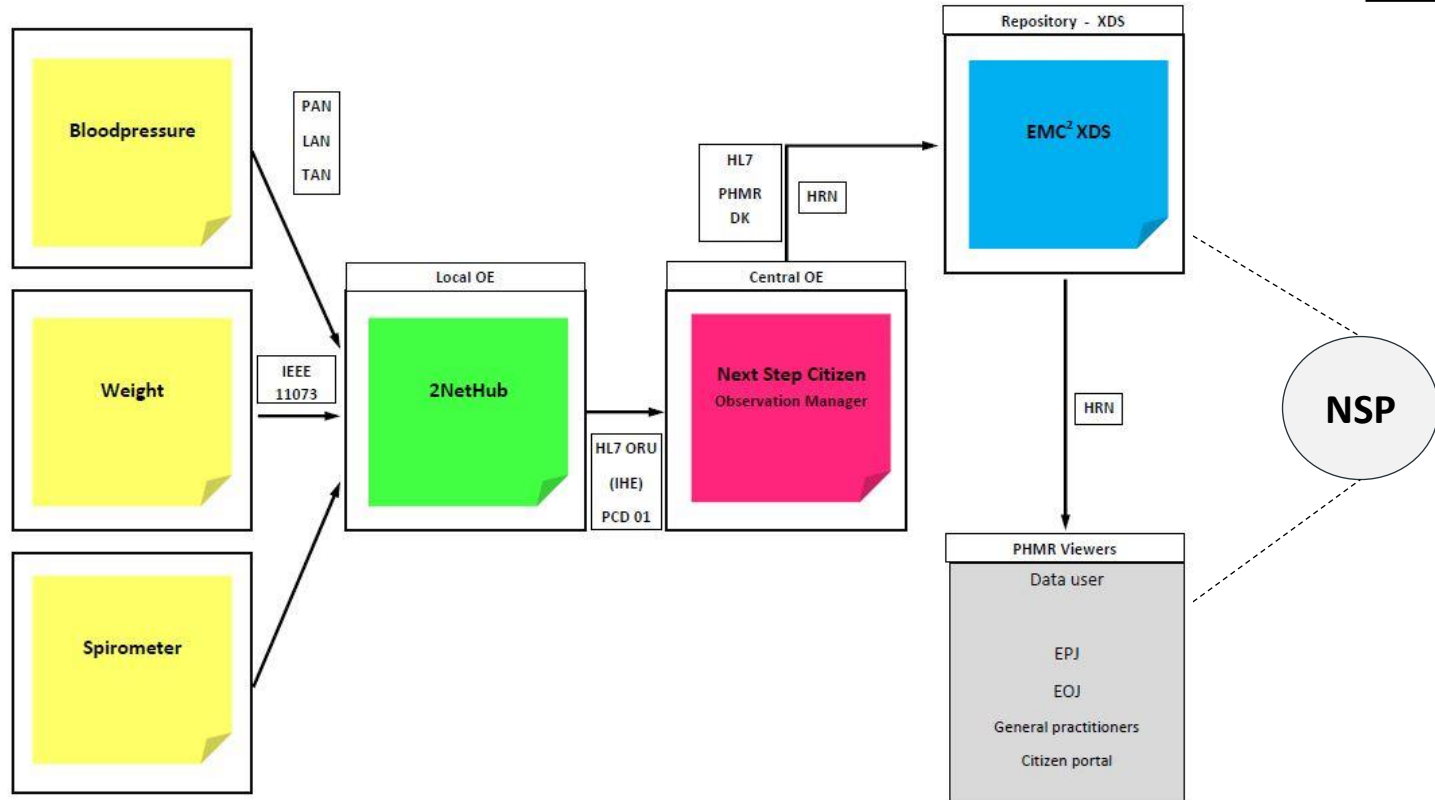

CoLab Plug & Play Phases

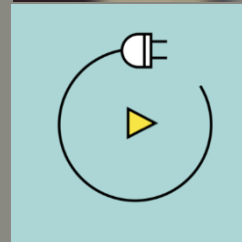

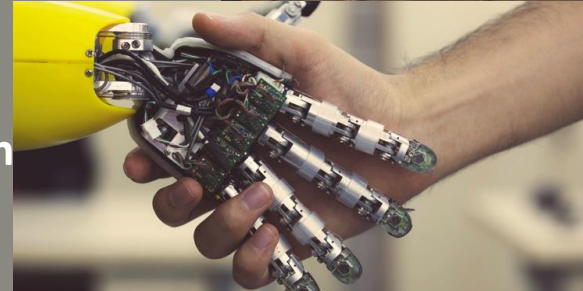

Architecture

Same language, different systems

Our aim is to create...

- High quality welfare and health care solutions developed to meet the needs of the users (citizens, clinical staff)
- Valid and qualified decisions for public investments in tomorrow's welfare and health care solutions
- Shorter and more effective development time

Thank you for your attention!
