CANAPE Winter Newsletter - Relive our Conference

Welcome to 2022, and the last year of the CANAPE project. Since the start of the project in 2017 we have made great progress, and learned a huge amount. Meanwhile the importance of land use in the Climate Change puzzle has become ever more apparent.

We would like to thank you for being on this journey with us so far, and to share a couple of highlights of the last few months with you.

The CANAPE & C-Connects Sustainable Peatlands Conference was a brilliant coming together of people across the field. To ensure the event has a lasting legacy, we are sharing the recordings and outcomes of the event.

Our event took place in Leeuwarden on the 13th to 15th of October 2021, with 6 sessions over 2 days, with over 40 speakers. Fortuitous timing with Covid levels allowed us to have an in-person event, with some of us meeting for the

first time in nearly 2 years. However, aware that not everyone would want to travel, we held it as a hybrid event, with large numbers joining online. Over 70 people came together in person, with another 100 joining online.

We had two days of talks, which can be viewed at our [YouTube Channel](#). To find information about the Presentations, Conclusions, and Pictures, please visit the [conference webpage here](#).

**TOGETHER
FOR OUR
PLANET**

Following the 26th Conference of the Parties to the United Nations Framework Convention on Climate Change, we want to take a moment to highlight the work that was done to promote peatlands in Glasgow. To learn more about what went on, [visit our news story here](#).

Carbon Farming on Peatlands could be great for Farmers and for the Planet – EU Report

We would like to bring to your attention A new white paper on Carbon Credits and Ecosystem Services jointly launched by our friends in the the EU Carbon-Connects & Care-Peat projects. Following the A3CA webinar **Sustainable Farming for Peatlands**, they have found that with the right framework in place it should be possible to finance the restoration of damaged peatlands, implement sustainable/alternative practices on peat soils, significantly reduce Greenhouse Gas emissions and provide a good living for farmers all at the same time.

Download the White Paper
