# Stakeholder engagement

Frame the 'problem'

(Co) design the solutions

Help with implementation

Feed into policy

Make the next project(s) better!

neighborhoods faster and more efficient

and emerging, like electric bikes and kickboards

co-designing and engaging in planning

#### ENGAGEMENT

indows could double as screens - richly nimated portals or larger versions of our nones, distracting ourselves with email, indless games and the infinite bazaar of ie internet...

SOCIAL

IMPACT

geo-fencing possibilities

vehicle ownership

reskilling professional drivers

productivity/impact on businesses

#### REGULATIONS

Media companies are already negotiating with carmakers

#### well being/flexibility/choice

social inclusion/alienation

additional travel demand from the non-driving, elderly, and people with travel-restrictive medical condition

further passivisation of travel - temptation to turn ever more inward, exchanging the physical world for yet another simulation

HUMAN [dis]CONNECTION

just as stea did before

possibility and access

efficiency

relieve stre

EXCITEM

----

### AUTONOMOUS VEHICLES

[are here]

ss cars will sometimes need to move the city with no humans in them at all ute to pickups or drop-offs

weither a second billing of branching the second

Elizabeth Hamilton-Argyropoulos (a.k.a. @bourgeoisalien): "The saddest part about self-driving cars will be all the times people die mid-trip and then ur dinner quests or pizza guy

Residents Technical team Potential users	Issue and problem definition	Co-design Graphical elicitation Observation	
	<b>\</b>		
Passengers Operators Wider stakeholders	Demonstration	Go-along interviews Observation Operator data / logs Serial vision

Original stakeholder groups	IS	Reflection	

## Some questions and issues

How can we move beyond engagement in 'demonstration'?

Technology might not be the best starting point.

Are we able to move from project inception to project evaluation?
