Climate change implies (radical) behaviour change

How to achieve that?

August 2 is

the day humanity will have used all the natural resources that the Earth can renew in 2017.

In other words,

we are consuming the resources of 1.7 planets.

INTERGOVERNMENTAL PANEL ON CLIMATE CHARGE

CLIMATE CHANGE 2014

Synthesis Report

The Paris agreement aims to keep global warming in the year 2100 below 2° C (above pre-industrial temperatures). Or less....

IPCC

'Emissions scenarios leading to CO2equivalent concentrations in 2100 of about 450 ppm or lower are *likely* to maintain warming below 2° C'

For this is needed:

- 40 to 70% global anthropogenic GHG emissions reductions by 2050 compared to 2010,
- and emissions levels near zero or below in 2100.

Good to know:

estimated 2011 levels are 430 ppm (uncertainty range 340 to 520 ppm)

Usual answer how to achieve all this:

- Energy efficiency
- Renewable energy
- Fuel switch

Where is the social aspect?

What can social science offer?

Individual freedom of smoking (drinking, taking drugs) against collective costs

Do info campaigns work? What works?

Social science reflection: cognitive dissonance, role model

Road works in Antwerp; commuters keep coming by car; resulting in two hours queuing before even arriving

Social science reflection: social convention; peer pressure; individual freedom myth

My Facebook friend visited an idyllic Indonesian island...

Social science reflection: distance (in time and in space), NIMBY, consumerism, eternal growth

When Enterprise made first contact with the Vissians, Trip took it upon himself to befriend the cogenitor, a third gender used for reproduction. He attempted to get the cogenitor to see that it was equal to its fellow beings, teaching it how to read and opening its eyes to such things as music and engineering.

The Vissians, however, did not take kindly to this, particularly when the cogenitor requested asylum with Enterprise. Archer denied its request, and it later committed suicide.

This encounter taught Trip that he sometimes acts too rashly when it comes to encountering new species.

It is actually useful with social thinking!

* Rediscover some of the oldies: Gemeinschaft – Gesellschaft (Tönnies) Figurational sociology/process sociology (Elias) Bureaucracy, power and status (Max Weber) Class and society (Marx)

* Rediscover some of the modern ones

Planned Change theories/ Resistance to change

Nudging

Gender and power

Integration and cultural relativism

Western supremacy/developed – under developed

Next North Sea programme

More space for visions

Early involvement of social sciences

More space for social, behavioural aspects of (project) life

The issue of change
